

FIELD SNAPSHOT •

Software is already inside the pharmacy

What 16 pharmacy visits reveal about
software, ordering and the human
workflow

13 of 16 had some form of software

Small directional sample — not a market-share estimate

Location

Bashundhara

13 of 16 pharmacies use some software

13 / 16

Software penetration looks high in this small, urban sample.

The next question is not adoption. It is what the software actually changes.

BONIK leads — at a higher price

IQRASYS

BONIK

Observed as more popular

70,000

INITIAL

3,000

MONTHLY

MEDIASOFT

30,000

INITIAL

2,000

MONTHLY

Reported price points from pharmacy visits; currency/unit should be reconfirmed before external use.

The real order flow still starts with a shelf visit

Entry specialists work across 3–4 pharmacies in parallel

THE HUMAN LAYER

The SR is the night-time procurement interface

1 Sees the shelves

2 Gives reminders

3 Takes the order

Software sits inside a relationship-led buying process.

THE OPERATING SYSTEM

Khata + software + cash

- 01 Khata captures the order
- 02 Software records the business
- 03 Cash closes the transaction

Digitization has not removed the analogue workflow — it sits beside it.

BONIK extends from POS into B2B ordering

Settlement mechanism was not confirmed in the field note.

Adoption is not explained by price alone

2.3x

higher initial price

70,000 vs 30,000

1.5x

higher monthly price

3,000 vs 2,000

BONIK was still observed as more popular — workflow, support or distribution access may matter more than price.

Design for the workflow that already exists

01

Human-assisted ordering

Support the SR and entry specialist instead of assuming self-serve.

02

Khata-to-system continuity

Make order capture and reconciliation work across paper and software.

03

Anchor fulfilment visibility

Show what was ordered, delivered and paid — clearly.

NEXT RESEARCH • active users • purchasing share • settlement flow
